[01]

// PROFILE

The bridge between *heavy-lifting data engineering* and *strategic decisions*.

Senior Data Analyst & Analytics Engineer. I build **enterprise Data Warehouses** in BigQuery, orchestrate pipelines (Dataform/Python), and model **semantic layers in LookML**. My focus is solving structural operational problems—from statistical anomalies like fan-outs to cloud cost optimization (FinOps) and C-level metric governance.

// STACK & SKILLS

ARCHITECTURE & ENGINEERING

BigQuery@gcp · SQL@advanced · Modeling@dimensional · FinOps@cloud

ORCHESTRATION & AUTOMATION

Dataform@gcp · Python@3.x · REST@api · Git@pr-review

SEMANTIC LAYER & BI

LookML@looker · Power BI@microsoft · Governance@kpi

SYSTEMS & BUSINESS

MS Project@api · Scrum@agile

[03]

// PRINCIPLES

01 *Single Source of Truth or nothing.*
A metric that needs an asterisk is a broken metric.

02 *Cost is a design choice.*
Partitioning and materialization are strategic decisions.

03 *Business rules dictate the contract.*
I don't model data in the abstract—I model the operation.

04 *Pipelines are code.*
Explicit DAGs, Git versioned, and protected by PR reviews.

[04]

// EDUCATION

Systems Analysis and Development
University — Curitiba, PR

GRADUATED · 2025

Additional courses
Advanced SQL · LookML · BigQuery FinOps · Dataform

// PROFESSIONAL EXPERIENCE

thecoffee.data.analytics_engineer

The Coffee / *Curitiba, BR*

JAN 2025 — PRESENT

SENIOR DATA ANALYST & ANALYTICS ENGINEER

DATA WAREHOUSE — Built the **enterprise DW in BigQuery** from scratch. Unified transactional data, product catalogs, and financial reconciliation using a *Medallion* architecture.

SEMANTIC LAYER — Designed the complete architecture in **LookML**. The model eliminated KPI discrepancies and solved chronic fan-out issues through *symmetric aggregates*.

ORCHESTRATION — Migrated legacy pipelines to a **Pipeline as Code** framework in Dataform. The result was an infrastructure with Git-versioned DAGs and reduced cloud costs.

ANALYTICAL MODELING — Developed a **multi-country Health Score** in native SQL to cluster international stores based on purchasing power parity and operational maturity.

odoo.erp.business_analyst

Odoo / *Curitiba, BR*

JAN 2025 — APR 2025

BUSINESS SYSTEMS ANALYST

IMPLEMENTATION — Led end-to-end **Odoo Enterprise** implementation projects, from *AS-IS / TO-BE* mapping to final system go-live.

CUSTOMIZATION — Developed custom business solutions in **Python, HTML, CSS, and XML** to cover complex operational gaps not addressed by the standard system.

fiberx.pmo.bi_analyst

FiberX / *Curitiba, BR*

JAN 2024 — DEC 2024

DATA ANALYST — BUSINESS INTELLIGENCE

AUTOMATION — Built pipelines in **Python** to extract and normalize MS Project schedules alongside internal APIs.

BI INTEGRATION — Automated data publishing to **Power BI** via *push datasets*. The change slashed the status report closing time from a full day to just a few hours.

1d → 2h	push api	ETL
status report closing time	automated power bi publishing	ms project + apis normalized

secret_outlet.bi.data_analyst

Secret Outlet / *Curitiba, BR*

JUN 2021 — DEC 2024

DATA ANALYST — BUSINESS INTELLIGENCE

DATA CULTURE — Created an ecosystem of **interactive Power BI dashboards** to bring scale and speed to operational data analysis.

REPORTING — Structured *ETL* routines and automated recurring report generation with Python, standardizing the closing cycle.

+30%	-25%	3.5y
efficiency in data analysis	report preparation time	recurring bi cycle
